EDUCATION

National University of Sciences and Technology | Bachelor's in Software Engineering Aug. 2019 – Aug. 2023

EXPERIENCES

Software Engineer December. 2024 – Present

xFlow Research | Islamabad, Pakistan

- Improved system throughput by 45% and reduced latency by 15% by optimizing performance-critical C++ modules and refining instruction-level execution.
- Increased processing efficiency by identifying CPU and memory bottlenecks and implementing low-level performance optimizations on Linux systems.
- Built multithreaded backend components to process high-volume real-time data, improving system scalability and reliability.
- Reduced system resource usage by optimizing memory management and buffer handling in performance-sensitive modules.
- Improved system stability and deployment reliability by collaborating with cross-functional teams and resolving performance-related production issues.

Full Stack Developer September. 2023 – November. 2024

TechFabbier | London, United Kingdom (Remote)

- Delivered weekly production releases by developing and maintaining mobile and backend features using Flutter and Node.js.
- Improved application performance and user experience by implementing new features and fixing production issues across frontend and backend systems.
- Reduced user-reported issues by debugging and resolving UI, API, and deployment problems in production environments.
- Built and maintained GraphQL APIs to support mobile application features and client requirements.
- Improved deployment reliability by managing builds, releases, and environment configurations across multiple environments.

Project Manager & Backend Developer Intern June. 2022 – July. 2022

Vialogic | Islamabad, Pakistan

- Designed and implemented MySQL database schemas to support LMS features and improve data management.
- Coordinated development and deployment tasks by tracking integration steps using Git and Jira.
- Assisted in backend feature development by customizing Moodle plugins and supporting new LMS functionality.
- Ensured successful Linux deployments by validating builds and resolving integration issues with cross-functional teams.

Certifications

Cybersecurity Certified (CC)

(ISC)² September. 2023

- Validates foundational knowledge in cybersecurity, including network security, risk management, access control, and security operations. Supports secure backend development, system hardening, and secure authentication system implementation

Scrum Fundamentals Certified (SFC)

Scrum Study January. 2021

- Demonstrates knowledge of Agile development methodologies and Scrum practices, including sprint planning, task tracking, team collaboration, and iterative software delivery in professional development environments.

SKILLS

- Languages | C, C++, Go, JavaScript, Python, Java, SQL
- Backend & Systems | Node.js, Express.js, REST APIs, GraphQL, Multithreading, Linux, System Programming, Performance Optimization, Networking, Concurrent Programming
- Frontend & Mobile | Flutter, WordPress, Laravel, HTML, CSS
- Databases | MySQL, DynamoDB
- Cloud & DevOps | AWS (ECS, ECR, S3, Lambda), Docker, CI/CD, Git
- Testing & Tools | JMeter, Selenium, Jira, Postman
- Cybersecurity & Networking Tools | Wireshark, Nmap, Burp Suite, Aircrack-ng, Cisco Packet Tracer
